Risk-Based Transportation Planning for Uncertainty

A Partnership between the Florida Department of Transportation and Three Florida Universities – Florida State University, University of Florida, and University of South Florida

Idaho APA Conference, October 2020
Presenters

Jennifer Z. Carver, AICP
Florida Department of Transportation

Dennis J. Smith, AICP
Florida State University

Assessment of Planning Risks and Alternative Futures for the Florida Transportation Plan (FTP) Update

How should Florida’s transportation system evolve to support mobility in the future?

How might the FTP goal areas and visions of alternate futures change in response to changes in risk and uncertainty?

How might the planning, policy setting process and implementation of the FTP change to accommodate risk and uncertainty?

How will the enhanced understanding of risk be incorporated into FDOT’s business, from preliminary planning and design through project implementation?
Participants and Tasks

- Three Universities
  - University of South Florida, Florida State University, & University of Florida
  - Involvement of students
- A common scope and set of tasks
- Non-collaboration during the research phase was a requirement
Five Areas of Inquiry

Population
Florida’s population will continue to grow
Florida will continue to have an aging population

Economics
Other sources for transportation funding will need to be explored
Public Private Partnerships

Environment
Climate change risks in Florida include sea level rise, extreme temperatures, and storm surge
Florida’s population will become more sprawled

Technology
Autonomous vehicles will impact the built environment and how people travel
Cyber security and user privacy will need to be considered when implementing new technologies

Global Issues
Threats of terrorism and global conflict are possible factors that can impact the transportation network
Florida should plan for an increase in volume for global trade routes
Poll Results: What are the greatest hazards that the transportation system in your community will face over the next 25 years?

- Climate change
- Funding
- Ageing
- Fire
- Sprawl
- Tax base
- Barriers for others
- Population changes
- Lack of funding
- Auto dependence
- Air quality
- Funding for Multi-modal
Literature Review

Plan Review

Reviewed State DOT’s Long-Range Transportation Plans

Identified best practices in risk assessment:

- What risks are addressed?
- How are they being addressed?
- Where in the planning process?
- How is risk assessment integrated into the planning process?
Risk to Assets

Promote an agile, resilient, and quality infrastructure (FDOT, 2015 FTP Policy Element),

Steps:

• Established a preliminary list of assets (2015 Florida Transportation Asset Management Plan)

• Reviewed assets included in various state LRTPs to expand categories (CA, GA, MN, MI, NY, UT)

• Accessed extensive asset databases maintained by state agencies (FDOT, DEP)

• Grouped asset vulnerability by type; transportation, environmental, economic

• Assigned of risk levels based on expert polling, validated by in-class review, and confirmed by final expert review.
Tools to Evaluate Risk and Uncertainty
### Risk Register

- **Flexible and customizable**
- **Comprehensive tool**
- **Useful at different stages of planning process**
  - Project evaluation
  - Stakeholder engagement

### Risk Event

### Opportunities

- Improved first and last mile connectivity by ridesourcing and ridesharing
- Ease of integrated corridor management (ICM) and multimodal integration
- More mobility options for aging population, teenagers, and users with limited mobility
- Improved public information (or public awareness) across different modes of transportation
- Ability to accommodate increase density and mix of uses
- Improved public transportation services in rural areas and between rural and urban areas
- Expanded interregional travel options for residents, visitors, and freight
- Reduced travel demand due to e-commerce, telecommunications and telecommuting
- UAVs reduce freight costs through the use of last-mile delivery services

### Threats

- More mobility options for aging population, teenagers, and users with limited mobility
- Improved public information (or public awareness) across different modes of transportation
- Ability to accommodate increase density and mix of uses
- Improved public transportation services in rural areas and between rural and urban areas
- Expanded interregional travel options for residents, visitors, and freight
- Reduced travel demand due to e-commerce, telecommunications and telecommuting
- UAVs reduce freight costs through the use of last-mile delivery services
### Risk Identification

Poll Results: Select the most disruptive or extreme event that may affect the future of transportation in Idaho

- Population/demographic trends: 71%
- Economic shifts: 14%
- Environmental impacts/natural hazards: 14%
- Advancements in technology: 0%
- Global issues: 0%
Case Study: Sea Level Rise In Florida
Sea Level Rise Scenarios

Sea Level Rise @ 2080
Curve 1 = USACE and NOAA Low
Curve 3 = NOAA Intermediate
Curve 5 = NOAA High
Fall 2018 Student Studio Work

1. Impacts on Vulnerable Populations
   - Vulnerable populations are a main area of concern. These risks set the horizon for FDOT when planning for mobility and evacuation.

2. Future Populations
   - Florida's population needs present long term risks on physical infrastructure and FDOT's future development.

3. Roads & Property
   - Sea level rise (SLR) poses very high long term threats to property, residents and inundation of roads.

4. Florida's Critical Infrastructure
   - SLR will impact critical facilities in the form of rail, airports, first responder facilities and schools.

5. Intermodal Rail Service
   - SLR impacts on intermodal freight systems and connectivity throughout the state.
Future Populations

Impact Residents in 2070 from Projection at NOAA High Scenario

Legend
- 0.8 NOAA High Scenario
- Impacted Population
  - 34 - 2,151
  - 2,152 - 3,162
  - 3,163 - 5,279
  - 5,280 - 9,715
  - 9,716 - 19,008
  - 19,009 - 38,476
  - 38,477 - 79,282
  - 79,283 - 104,707
  - 104,708 - 343,714
  - 343,715 - 718,730

Total Number of Residents from Projection Impacted by Sea Level Rise in 2070

Why Focus on Future Populations?
- People moving inland
  - Increased inland road capacity
  - Physical deterioration of existing roads
  - Changes in land use and new roads
- Loss of future taxable land
- Changing travel patterns
Why Focus on Vulnerable Populations?

- Shift in travel patterns and mobility
- Barriers to certain forms of travel
- Vulnerable when thinking of extreme cases like evacuation routes

Highest Concentrations of 65 Up impacted by permanent flooding
